

## Prism Deploy® Features

Managing mobile Windows systems and remote locations presents new IT challenges. Prism Deploy automates and streamlines software deployment, updating, repair and removal to give you full control over your computing infrastructure — any time, anywhere.

Perform large deployment projects in hours instead of days or weeks. Using Prism Deploy’s superior packaging technology, you can deploy software up to five times faster than native Windows installations. And, Prism Deploy keeps control of your systems with dynamic software updating and other management features that ensure ongoing configuration compliance across the network.

Prism Deploy is part of New Boundary Technologies’ Prism Suite of desktop management solutions. The Prism Suite also includes Prism Asset Manager® and Prism Patch Manager®.

|                                      |  |
|--------------------------------------|--|
| <b>Smart Update™</b>                 | The driving technology behind Prism Deploy, Smart Update automatically targets computers with the right software, update or patch based on any configuration set by the administrator. Create standard, set-and-forget configurations that are self-monitoring and self-healing.                 |
| <b>Internet-Based Administration</b> | Prism Deploy makes managing your mobile workforce and widely distributed environments easy, and enables secure administration from any remote location with an Internet connection.  |
| <b>Distribution Locations</b>        | Prism Deploy enables you to use any system in any location as a local repository for distributing software packages and configuration tasks to conserve bandwidth and dramatically reduce travel time to remote sites.   |
| <b>Dynamic Updates</b>               | Prism Deploy updates computers in real time with no user intervention to keep your organization up and running — and productive.   |
| <b>Prism Console</b>                 | The Prism Console is highly flexible, letting you customize views any way you want. Make the interface as simple or as granular as your needs dictate.   |
| <b>Robust Reporting</b>              | Prism Deploy features a dynamic reporting engine that creates standard or customized reports with drag-and-drop ease. Customize your reports to match your processes and help you make better-informed decisions.  |
| <b>Prism Deploy Packager</b>         | With the Prism Deploy Packager, it’s easy to build a package representing any system change: entire applications, simple registry changes, a printer installation or the removal of unapproved software. Once built, packages can be customized to install in even the most diverse environment. |
| <b>Flexible Deployment Options</b>   | Automate different types of installations (.MSI, .BAT, .VBS, .PWC, etc.) using elevated accounts on any desired schedule. Prism Deploy can perform most installations without requiring end-user log in and, when needed, can remotely wake up computers (WOL).                                  |
| <b>64-bit Packaging</b>              | Prism Deploy makes it easy to package 64-bit software applications. And, Prism Deploy packages can be installed up to five times faster than native Windows installations.   |
| <b>Intuitive Operation</b>           | With Prism Deploy you can perform a successful rollout in minutes, not days or weeks. Operation is intuitive and easy-to-learn, while advanced features let you automate even the most complicated tasks in complex environments.  |
